SAN FRANCISCO (S&P Global Ratings) Dec. 13, 2017--S&P Global Ratings today said it raised its fund credit quality rating (FCQR) on the Solano County Treasurer's Investment Pool to 'AAAf' from 'AAf' and affirmed its 'S1' fund volatility rating (FVR). The rating actions follow our review of the county's pool under our revised FCQR and FVR criteria (see "Fund Credit Quality Ratings Methodology" and "Fund Volatility Ratings Methodology," published on June 26, 2017). At the same time, we removed the regulatory identifier "UCO" (under criteria observation) from the ratings. We had placed the ratings on UCO on June 26, when we published the revised criteria.

Solano County was incorporated in 1850 as one of the original 27 counties in the state of California. The Solano County Treasurer's Investment Pool is managed by the staff of Treasurer/Tax Collector/County Clerk, Charles Lomeli. The pool acts as a depository for more than 80 units of local government, including funds of the county school districts, special districts, and other entities. The Solano County Treasurer's Investment Pool is invested in accordance with the county's investment policy and the State of California government code. The objectives of the Solano County Treasurer's Investment Pool are to meet the cash requirements of the pool participants; invest the funds in a safe, legal, and prudent manner; and achieve a rate of return commensurate with the risks taken. Based on these guidelines, the pool is generally invested in bank deposits, corporate securities (including commercial paper and medium-term notes), federal agency securities, U.S.

Solano County Treasurer's Investment Pool Fund Credit Quality Rating Raised To 'AAAF'; 'S1' Rating Affirmed

Treasury securities, municipal bonds, and other mutual funds/investment pools. Investment guidelines limit short-term investments to issuers rated 'A-1'/'P1' or better and long-term investments to issuers rated 'A' or better.

The 'AAAF' FCQR signifies that the credit quality of the fund's portfolio exposure is extremely strong. The change in the FCQR reflects the application of our revised FCQR methodology, rather than a shift in the investment policy for the pool. When assigning the 'AAAF' ratings, we first determined a preliminary FCQR through our quantitative assessment of a fund's portfolio risk using our fund credit quality matrix. Our assessment reflects the weighted average credit risk of the portfolio of investments. The final rating did not differ from our preliminary assessment given our adequate assessment of the qualitative components of Solano County Treasury team and neutral portfolio risk assessment.

The 'S1' FVR signifies that the fund exhibits low volatility of returns comparable to a portfolio of short-duration government securities, typically maturing within one to three years and denominated in the base currency of the fund. We determined the FVR by assessing the historical volatility and dispersion of fund returns relative to reference indices. Next, we evaluated portfolio risk, taking into account duration, credit exposures, liquidity, derivatives, leverage, foreign currency, and investment concentration. Given the determination that these portfolio risk factors were consistent, there was no adjustment to the preliminary FVR derived in review of return volatility and dispersion. We then used the adequate assessments of the qualitative components to determine no adjustment was required to the FVR.

In determining the final FCQRs and FVRs, we performed a comparable rating analysis with other funds that have similar portfolio strategy and composition. Here we focused on a holistic view of the fund's portfolio credit quality and characteristics relative to its peers. The comparative rating analysis did not result in any adjustment to the rating to determine the final FCQRs or FVRs.

An FCQR, also known as a "bond fund rating," is a forward-looking opinion about the overall credit quality of a fixed-income investment fund. FCQRs, identified by the 'f' suffix, are assigned to fixed-income funds, actively or passively managed, typically exhibiting variable net asset values. The ratings reflect the credit risks of the portfolio investments, the level of the fund's counterparty risk, and the risk of the fund's management ability and willingness to maintain current fund credit quality. Unlike traditional credit ratings (e.g., issuer credit ratings), an FCQR does not address a fund's ability to meet payment obligations and is not a commentary on yield levels.

An FVR is a forward-looking opinion about a fixed-income investment fund's volatility of returns relative to that of a "reference index" denominated in the base currency of the fund. A reference index is composed of government securities associated with the fund's base currency. FVRs are not globally comparable. FVRs reflect our expectation of the fund's future volatility of

returns to remain consistent with its historical volatility of returns. FVRs reflect S&P Global Ratings' view of the fund's sensitivity to interest rate risk, credit risk, and liquidity risk, as well as other factors that may affect returns such as use of derivatives, use of leverage, exposure to foreign currency risk and investment concentration, and fund management. Different symbology is used to distinguish FVRs from S&P Global Ratings' traditional issue or issuer credit ratings. We do so because FVRs do not reflect creditworthiness, but rather our view of a fund's volatility of returns.

We review pertinent fund information and portfolio reports monthly as part of our surveillance process of our fund credit quality and volatility ratings.
